High-Quality Visual Experience

Marta Mrak 2010-09-08 Last few years have seen rapid acceptance of high-definition television (HDTV) technology around the world. This technology has been hugely successful in delivering more realistic television experience at home and accurate imaging for professional applications. Adoption of high definition continues to grow as consumers demand enhanced

features and greater quality of content. Following this trend, natural evolution of visualisation technologies will be in the direction of fully realistic visual experience and highly precise imaging. However, using the content of even higher resolution and quality is not straightforward as such videos require significantly higher access bandwidth and more processing power. Therefore, methods for radical reduction of video bandwidth are crucial for realisation of high visual quality. Moreover, it is desirable to look into other ways of accessing visual content, solution to which lies in innovative schemes for content delivery and consumption. This book presents selected chapters covering technologies that will enable greater flexibility in video content representation and allow users to access content from any device and to interact with it.

Understand Electronics

Owen Bishop 2013-10-22
Understand Electronics provides a readable introduction to the exciting world of electronics for the student or enthusiast with little previous knowledge. The subject is treated with the minimum of mathematics and the book is extensively illustrated. This is an essential guide for the newcomer to electronics, and replaces the author's best-selling Beginner's Guide to Electronics. The step-by-step approach makes this book ideal for introductory courses such as the Intermediate GNVQ.

Solar and Space Physics National Research Council 1988-02-01 From the interior of the Sun, to the upper atmosphere and near-space environment of Earth, and outward to a region far beyond Pluto where the Sun's influence wanes, advances during the past decade in space physics and solar physics--the disciplines NASA refers to as heliophysics--have yielded spectacular insights into the phenomena that affect our home in space. *Solar and Space Physics*, from the National Research Council's (NRC's) Committee for a Decadal Strategy in Solar and Space Physics, is the second NRC decadal survey in heliophysics. Building on the research accomplishments realized during the past decade, the report presents a

program of basic and applied research for the period 2013-2022 that will improve scientific understanding of the mechanisms that drive the Sun's activity and the fundamental physical processes underlying near-Earth plasma dynamics, determine the physical interactions of Earth's atmospheric layers in the context of the connected Sun-Earth system, and enhance greatly the capability to provide realistic and specific forecasts of Earth's space environment that will better serve the needs of society. Although the recommended program is directed primarily at NASA and the National Science Foundation for action, the report also recommends actions by other federal agencies, especially the parts of the National Oceanic and Atmospheric Administration charged with the day-to-day (operational) forecast of space weather. In addition to the recommendations included in this summary, related recommendations are

presented in this report.
Flat-Panel Displays and CRTs
Lawrence E. Tannas
2012-12-06 Flat-Panel Displays
and CRTs, a review of
electronic information display
devices, is the first systematic
and comprehensive coverage of
the subject. It is intended to
distill our wealth of knowledge
of flat-panel displays and CRTs
from their beginnings to the
present state of the art.
Historical perspective, theory
of operation, and specific
applications are all thoroughly
covered. The field of display
engineering is a
multidisciplinary technical
pursuit with the result that its
individual disciplines suffer
from a lack of communications
and limited perspective. Many
previously developed
standards for, and general
understanding of, one
technology are often inappropriate
for another. Care has
been taken here to document
the old, incorporate the new,
and emphasize commonalities.
Criteria for performance have
been standardized to enable an
expert in one display

technology, such as liquid
crystals, to compare his device
performance with that offered
by another technology, such as
electroluminescence. This book
has been written with a second
purpose in mind, to wit, to be
the vehicle by means of which
a new scientist or engineer can
be introduced into the display
society. It is organized to be
tutorial for use in instructional
situations. The first chapters
begin with first principles and
definitions; the middle
chapters set out requirements
and criteria; and the last
chapters give a complete
description of each major
technology.

The Cinema in Flux Lenny Lipton 2021-04-07
The first of its kind, this book traces the evolution of motion picture technology in its entirety. Beginning with Huygens' magic lantern and ending in the current electronic era, it explains cinema's scientific foundations and the

development of parallel enabling technologies alongside the lives of the innovators. Product development issues, business and marketplace factors, the interaction of aesthetic and technological demands, and the patent system all play key roles in the tale. The topics are covered sequentially, with detailed discussion of the transition from the magic lantern to Edison's invention of the 35mm camera, the development of the celluloid cinema, and the transition from celluloid to digital. Unique and essential reading from a lifetime innovator in the field of cinema technology, this engaging and well-illustrated book will appeal to anyone interested in the history and science of cinema, from movie buffs to academics and members of the motion picture industry.
